#### Responses (11 of 15)

Professor Nakao's teaching was easily the best learning experience I've had through the first half a year of courses at UD. He consistently made the course material as easy as possible to understand, despite it's rigorous material and extensive amount of content. Sometimes it's tough to want to get up for a class that you don't have interest in, but even with tougher concepts being discussed, I enjoyed taking his class.

Good teacher, no complaints.

Professor Nakao cares a lot about his students and was a great instructor for this course.

I think this professor was one of the best professor I've had so far at UD. They were very passionate in the material and educating the students about said material, allowing for a very efficient environment for learning, where all the students are able to excel in the class, and I'm sure all of the students in the class would say the same.

Joseph is really just awesome overall. I have now taken quite a few college level math courses, and Joseph was by far the best professor I have had. I actually chose his class specifically because he was the professor. When I first went to take this course, I had Joseph as my Lab and Discussion TA. Due to extenuating circumstances, I ended up dropping the class. However, prior I found that his explanations of course content during Lab were better thought out and understandable than my actual lecture.

This professor was very clear in what he expected from us and in teaching the material.

Best professor I've ever had

It is a privilege to have him as a teacher. Very passionate.

Professor Nakao is one of the best teachers I've ever had.

He was really great at teaching the material.

He was always open to helping any one of us outside of class whether it would be during office hours or a scheduled time outside office hours both by zoom or in-person. He was also very thorough with the material and took time in making sure the material and all of its real-world applications was understood for both its purpose and with its computations.
